To whom it may concern

Ref: Candura Instruments Letter of Reference

The Panama Canal Authority (ACP) is an entity of the government of Panama. This enterprise is charged with operating, maintaining and improving the Panama Canal. We also generate our own power to make our operations more reliable.

The Metering Department of the Energy Division of ACP purchased Candura Instrument's Power Pro as a measuring devices to provide instruments as a primary tool for resolving power quality issues on our Power system.

The Metering Department has been using these devices since the year 2004 and we have found them environmentally robust, simple to use, and reliable. The power View software used to analyze the measurements has been found friendly too use and has no conflict with our IT policies. The client support given by Candura has been excellent. Candura equipment's has been able to help us to solve and answering power qualities problems, load and demand surveys along the Panama Canal.

Yours truly,
